## Machine Learning - 1100-ML0ENG (Ćwiczenia informatyczne Z-23/24)

<u>Home</u> > My courses > <u>Machine Learning - 1100-ML0ENG (Ćwiczenia informatyczne Z-23/24)</u> > Ensemble learning > Random forest2

### **Random forest2**

library(caret)

```
#income
inc=read.csv("income.csv", stringsAsFactors = T)
summary(inc)

library(dplyr)
inc=inc%>%
  select(age,educationYears,relationship, gender, workHours, income)

library(caTools)
set.seed(23)
split = sample.split(inc$income, SplitRatio = 0.7)
train = subset(inc, split == TRUE)
test = subset(inc, split == FALSE)

prop.table(table(inc$income))
prop.table(table(train$income))
```

#### **Tree**

```
#rpart
library(rpart)
model= rpart(formula = income ~ ., data = train)
library(rattle)
fancyRpartPlot(model)
y_pred=predict(model,test,type = "class")
#table(y_pred, test$income)
confusionMatrix(y_pred, test$income)
```

```
acc(y_pred, test$income)
roc.function(y_pred, test$income)
```

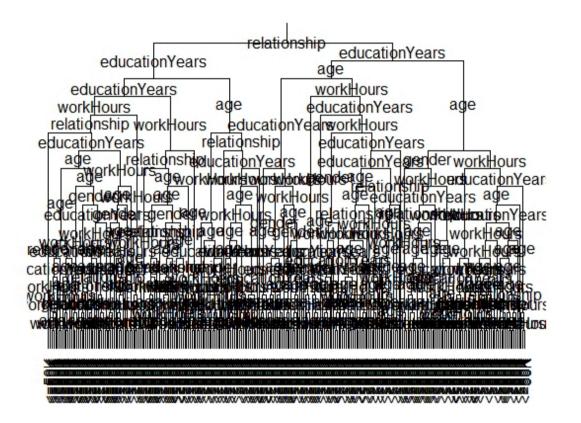

#### **Forest**

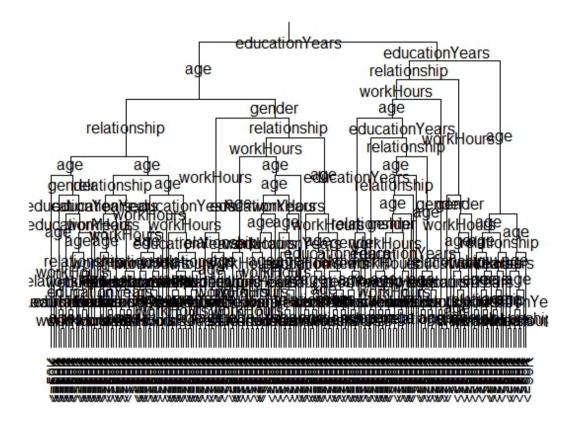

```
set.seed(321)
rf.inc = randomForest(income~., data=train)
plot(rf.inc)
```

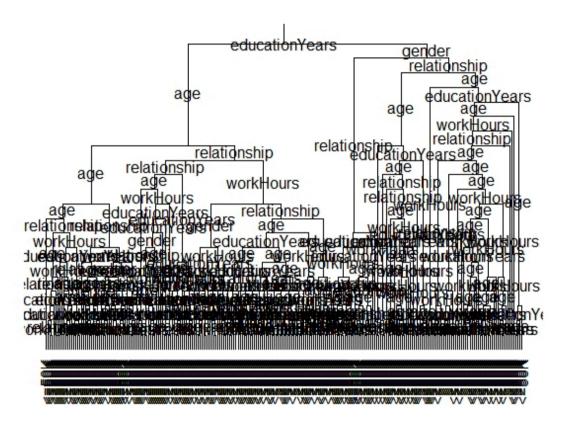

```
rf.inc.pred <- predict(rf.inc, newdata= test)
```

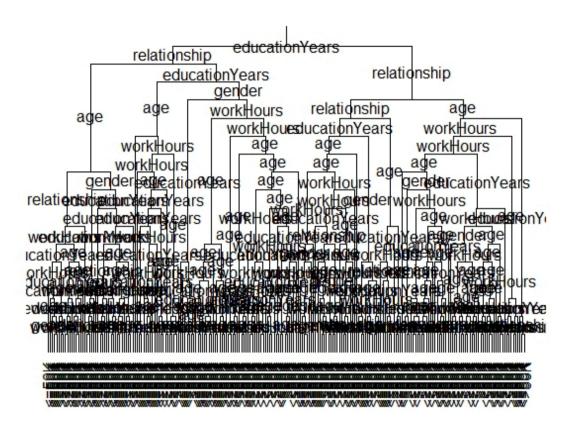

```
confusionMatrix(rf.inc.pred, test$income)
```

```
acc(rf.inc.pred, test$income)
roc.function(rf.inc.pred, test$income)
```

#### **K-Fold Cross Validation**

```
control = trainControl(method="cv", number=10)
model.caret = train(income~ .,data=train, method="rf", trControl=control)
plot(model.caret)
model.caret
model.caret$resample$Accuracy
```

```
cv.y_pred = predict(model.caret, newdata = test, type = 'raw')
table(cv.y_pred,test$income)
roc.function(cv.y_pred, test$income)
```

#### **Random Forest Explainer**

```
install.packages("randomForestExplainer")
library(randomForestExplainer)
```

```
min.rf <- min_depth_distribution(rf.inc)
plot_min_depth_distribution(min.rf,k=nrow(test))</pre>
```

```
explain_forest(rf.2, interactions = TRUE, data = train)
```
